MILITARY NEEDS

"Our Army at War --

Relevant and Ready"

- Operational and Tactical Levels do not Share a Timely Common Picture.
- Sensor Integration and Synchronization are Manpower Intensive, Too Slow, and Difficult to Exploit.
- •ISR Visualization is not Adequate.

TO: CSA, CJCS

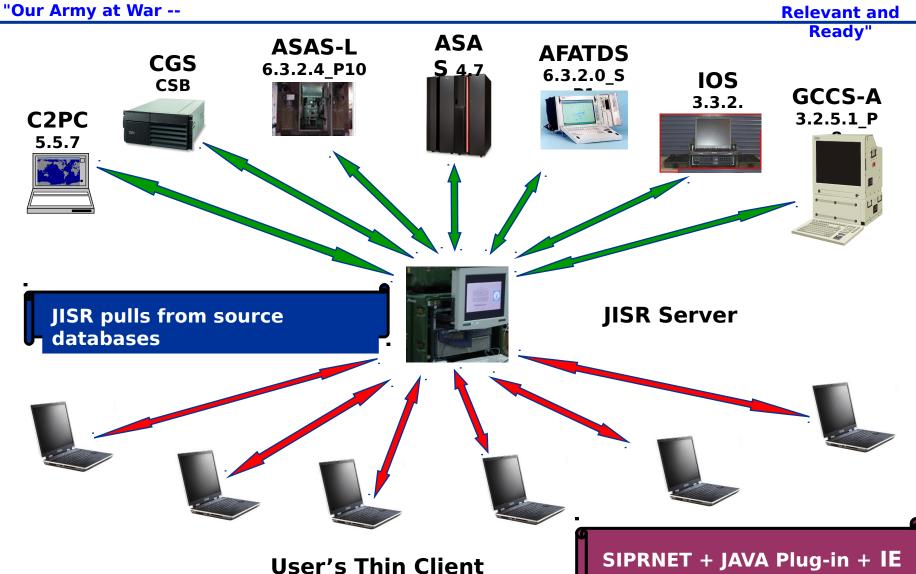

"JISR addresses several of my concerns regarding systems interoperability and compatibility between the services The integration of multi-service, multi-echelon ISR & operational data combined with JISR's enhanced visuals will provide value-added capability to our deployed forces. JISR will... enable us to disseminate and share vital intelligence down to the real warfighters in the central

WHY JISR?

"Our Army at War --

JISR Leverages:

- GCCS/GCCS-A/GCCS-M
- **IOS**
- ASAS-RWS
- ASAS-Lite
- CGS
- C2PC
- AFATDS App Server

JISR Provides Unique:

- One-Stop Access Sources
- Network Accessible Data and Information Products
- Ability to Display and Disseminate Critical ISR Information, Regardless of HW Platform to:
 - Current Ops and Plans
 - Low Density Users
 - Disadvantaged Users
 - Early Entry Forces over Constrained Pipes

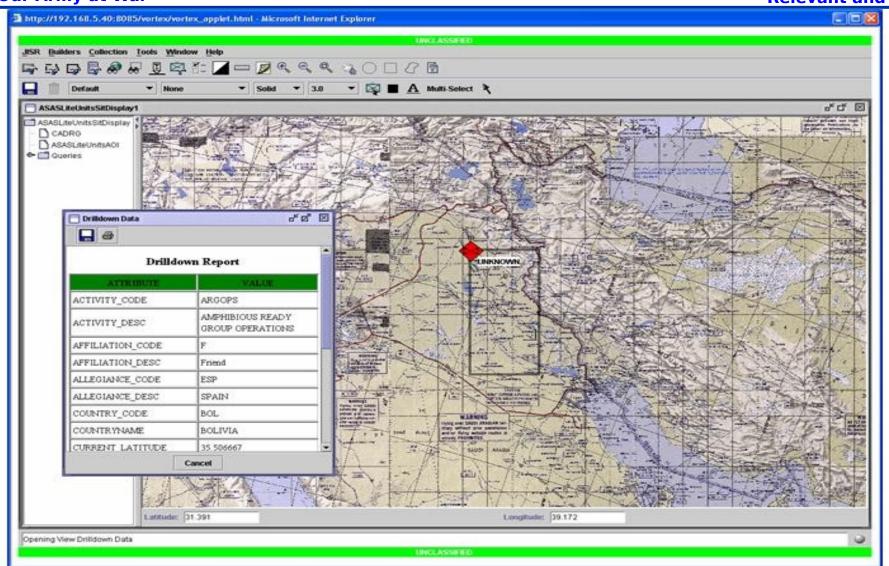

Today's ISR Systems Interoperate Within Their Levels, but Not Between Each Level Degrading ISR Capabilities in Multi-Echelon Operations for Early Entry Force Missions. JISR
Will Work the Seams Between the Levels for Increased Interoperability and Greater ISR
Visibility.

IEW&S JISR Situational Display

JISR'S OPERATIONAL RELEVANCE (SITUATIONAL AWARENESS)

Relevant and Ready"

"Our Army at War --

With JISR

- End user can query and filter situation display(s) based on multiple concurrent sources
 - Leverages inputs from available systems beyond COP/UDOP feed (e.g. AFATDS, ASAS, GCCS-A, CGS) COP/UDOP plus customized sources allows users to simultaneously maintain COP/UDOP and perform MOS duties
 - ✓ Drill Down Capability on Tracks
- Web based deployment guarantees consistency across battlefield to situation display(s)

<u>JISR IS....</u>

- A software application that provides THIN-CLIENT browser access on any C4I workstation to critical ISR information
 - **✓** Across battlefield functional areas
 - ✓ Up and down echelons
- User-defined "publish" and "subscribe" to live info feeds
 - ✓ Live COP/UDOP pulls for broader, faster, situational awareness
 - ✓ Alarms giving users immediate notification
 - ✓ Standing queries against designated source systems
- Responds rapidly to a rigorous user

requirements process ASAS Lite feeds for JTF 7

JISR'S SIMPLE DESIGN

- JISR is a Java based client server system that operates on UNIX or Intel based platforms
- The User (client) only needs two things
 - Connection to the SIPRNET
 - A Browser [IE 6.0 with Java plug-ins enabled] Thin-Client
- The JISR server has read-only permissions for the source systems data tables. It "listens" for changes to the data tables and uses bandwidth only for the changes
- It does <u>NOT</u> write to any system of record or change any data
- Once the server gets the data it is entered into the JISR database
- Users (clients) only get their data from the

JISR IS NOT....

- An Intelligence Information Correlator or Fusion System
- Another Hardware Platform That Adds Any Increased Footprint [Power/space/operator] to Command Posts
- A Replacement for Army, Joint, or Service Equivalents
- A Stand-Alone System

OPERATION IRAQI FREEDOM

- 11 Dec 02 COL Boltz, V Corps G2, Strongly Requested JISR Provide Support to V Corps HQ for Upcoming "Operation Iraqi Freedom"
 - "You Give Something I Don't Have That I Need. You, JISR, Can Show Me the Red and Blue and I Am Taking You Forward With me."
- Army G3 Followed up With a Letter Directing JISR Support for V Corps
- TM JISR Minimized Financial Impact by Using Existing Equipment and Personnel to Maximum Extent
- Direction to Focus All of Raytheon JISR Team on V Corps, Support to War
- Period of OIF Support Was Extended to End of FY03
- The JISR Server Was Able to
 - Retrieve and Display All Red Information Available in the RWS BLK II
 - Provide Tailorable Situational Awareness to the Disadvantaged User
